-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### **LACK OF UNITY**

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

**Group I, claims 1-25**, drawn to a punch and wind machine.

**Group II, claims 26-34**, drawn to a process for winding material.

**Group III, claims 35 and 36**, drawn to a wound core.

The inventions listed as Groups I, II and III, do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group I and II lack the same technical features because the punch and wind machine is can be controlled by a linear sensor that counts markings placed on the material and imparts a punching of the material based upon the counted markings irrespective of the winding on the mandrel. Similarly, the method of Group II does not have the same technical features as enumerated in the Group I inventive concept because the control of the punching and winding can be independently sensed and actuated without regard to the winding operation. Group III lacks the same technical feature as Group I because the wound core can be controlled manually and can be wound without dependence upon the winding angle and length.
